Background

With India aiming to become a global hub for steel production, the demand for both manganese and chrome and ferro alloy is expected to rise steadily. As manganese and chrome ore are the basic raw materials for steel making, with the growth of iron and steel sector, there is huge potential of manganese, chrome ore and ferro-alloys industry in India. Globally, the importance of manganese ore is increasing as a vital material in future of electric vehicles industry with the commitment for reducing greenhouse gas emissions and leveraging renewable energy sources.

Our country is endowed with huge resources of manganese ore to the tune of 504 million tonnes and chrome ore to the tune of 332 million tonnes as on 1st April, 2020. However, it is ironical that despite possessing rich resources, domestic mining industry and ferro-alloy industry is compelled to import these minerals. The National Steel Policy of India, 2017 aspires to achieve 300 million tonnes of steelmaking capacity by 2030. Hence, there is need for enhanced production to meet the requirement of 11 million tonnes of manganese ore and 5 million tonnes of chrome ore by 2030-31.

Ferro alloys are essential to the Indian steel industry, significantly contributing to both domestic consumption and foreign exchange earnings. Despite this fact, the industry faces several structural, operational, and policy-related challenges that hinder its growth and global competitiveness. Therefore, it is necessary to develop a roadmap so that industry rise to new levels with enhanced productivity.

Due to shifting of global supply chains, green energy transitions, and geopolitical uncertainties, stakeholders across the value chain from exploration and extraction to processing and trade face both new opportunities and pressing challenges. These include sustainability imperatives, price volatility, and the urgent need for technological innovation. Further, at the same time, challenges such as raw material shortage, non-operation of new mines, and resource depletion in existing mining zones, environmental compliance, beneficiation requirements, and logistics bottlenecks necessitate a coordinated approach among stakeholders.

This Summit will provide a unique platform for the manganese / chrome ore and alloy producers, consumers, technology suppliers, as well as others to discuss green technological

developments, legislative issues, ESG, research & development and market trends. Producers, consumers, buyers and traders will have the opportunity to discuss and review supply and demand related issues in open forums and private meetings. Suppliers of exploration, mining processing equipment and metallurgical technologies will have an opportunity to make presentations on manganese/chrome ore and alloys to the stakeholders.

Location

The summit will be held in Visakhapatnam, the financial hub of Andhra Pradesh. With its strategic location on the East Coast, it is the ninth-largest contributor to India's GDP.

The city is home to the oldest shipyard and the only natural harbour on the east coast of India. It is referred to by many nicknames such as the City of Destiny and the Jewel of the East Coast. Visakhapatnam is one of the major tourist destinations in the state of Andhra Pradesh. The city is famous for beaches, caves and the Eastern Ghats as well as wildlife sanctuaries.

Major landmarks in the city include Dolphin's Nose Lighthouse, Visakha Museum and Matsyadarsini (an aquarium), INS Kursura Submarine Museum, Indira Gandhi Zoological Park, Erra Matti Dibbalu (red sand dunes) and Bheemunipatnam (one of the geo-heritage sites in the country). Vuda City Central Park in Visakhapatnam is the country's tallest musical fountain.

The venue will be Novotel Visakhapatnam Varun Beach in Visakhapatnam the financial hub of Andhra Pradesh.

Call For Papers

Prospective speakers are invited to submit the final paper by 20 November, 2025 by e-mail. To ensure the scheduling and smooth running of your presentation kindly inform your audio-visual requirements:
